OTHER LIST OPERATIONS

- `sort()` **and** `sorted()`

- `reverse()`

- and many more!
 https://docs.python.org/3/tutorial/datastructures.html

`L=[9,6,0,3]`

`sorted(L)` → returns sorted list, does **not mutate** `L`

`L.sort()` → **mutates** `L=[0,3,6,9]`

`L.reverse()` → **mutates** `L=[9,6,3,0]`
